

ABOUT Us

W2 Systems has been designing, building and servicing water and wastewater treatment equipment since 1986. Preventing and fixing issues is only half the battle. At W2 Systems we are constantly working to assure systems are up to date and running at maximum efficiency so that problems do not occur and no excess consumption exists.

We believe that if you spend the money to keep your system operating at peak performance, we should use our knowledge and ability to make that system run like the day it was made.

Our turn-key service team will fix, upgrade and maintain your system, from the controls and tanks to the components. We are proud to be the Bay Area's water treatment service provider.

Water and Wastewater Treatment Systems

Water and Wastewater Treatment Systems

SERVICE

Most water and wastewater treatment systems are not properly cared for. It's important to have an effective treatment system that consumes less chemical and creates a better end product.

Choose a company with specialization that will handle the total operation of the system, and continually fine tune and upgrade your systems to assure maximum efficiency.
